

# Snap

Are you one of those people with 200 great photos in your digital camera or mobile phone? Or perhaps you've downloaded heaps of great photos to your computer but never printed them out because you weren't sure how to do it.

Read on to find out how to download and print your digital photos at home, and share them with your friends and family.

# Save

Follow these basic steps to save photos from your digital camera or mobile phone to your computer.

## From Camera to Computer

**1** Connect the camera to your computer with the USB cable which came with the camera. Turn on the camera and select 'Play' mode – (see camera manual for precise connection instructions).

**2** A box listing several programs will display on your screen. Click on one of them, eg: Microsoft Camera Wizard or your camera's Program. (If not loaded you'll find it on the CD that came with your camera.)

**3** Select the photos you want to transfer to your computer.

**4** Select the folder you wish to save your photos into eg: MY PICTURES (You can make a new folder within My Pictures with it's own title eg: Fiji Holiday)

**5** Click to save your photos onto your computer.

## From Memory Card to Computer

If either your printer or your computer has a memory card slot:

**1** Remove the memory card from your camera or mobile phone and insert it into the memory card slot in your printer or computer.

**2** Then follow steps 2 to 5 to the left.

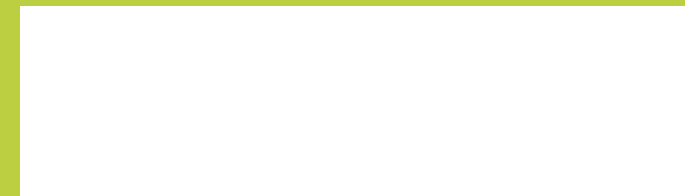

**You have now downloaded your photos onto your computer. The next step is to print them out!**

See how overleaf.

INKS AND PHOTO PAPERS  
FOR ALL INKJET PRINTERS

# Print

Did you know you can print your photos on even the most basic inkjet printer? There is no need for an expensive photo printer, as most basic printers sold in the last 3 years are photo capable.

There are three ways you can print out your photos:

- 1 From your computer to your printer using one of:
  - a. Your printer's photo printing program
  - b. Photo download program
  - c. Your camera's program
  - d. Photo editing program (like Adobe Photoshop).
- 2 Directly from your printer if it has a slot for your memory card and LCD screen.
- 3 From your camera to your printer if it can connect to your printer with a cable like PictBridge.

Calidad RECOMMENDS USING YOUR PRINTER'S PHOTO PRINTING PROGRAM as the best and easiest way to print your photos. It is also uses less ink! Follow these simple steps...

- 1 Once you have saved your photos, EXIT out of that program.
- 2 Open your printer's photo printing program. Eg:
  - a. Canon Easy Photoprint
  - b. Epson Easy-Photoprint or Photoquicker
  - c. HP Image Zone
  - d. Lexmark Imaging Studio (recent models only).

Your photo printing program loads automatically with the printer software when you first install your new printer.

It should have its own icon on your Windows Desktop.

If you can't find the icon click 'Start', then click 'All Programs' and you will find it among the group of programs for your printer brand.

- 3 Select the folder where you saved your photos (eg MY PICTURES).

- 4 Select each photo to print by clicking on it.

- 5 Select the photo paper type: "Glossy Photo Paper"

- 6 Select the paper size: "4 x 6"

- 7 Select "Borderless prints" if the option is available to you

- 8 Load the Calidad photo paper (4 x 6" size) into your printer.

If your printer paper tray is at the back of the printer, place the paper on the right hand side of your paper tray with the glossy side facing you.

Just slide the paper guide across to hold the paper.

If your printer paper tray is under the printer load it glossy side facing down.

- 9 Finally, click on 'PRINT' and all the photos you have selected will print out in sequence.

After the first time, you'll be amazed at just how quickly you can SAVE and PRINT your precious memories on your basic home printer.

And by using the combination of high quality Calidad inks and photo papers, you can print brilliant photos for as little as 17c each\* and share them with your friends and family. Get printing now with Calidad!
